COMFAST
Outdoor AP

Quick Installation Guide

1. Please set automatically get ip for the computer , connect the ap lan port to the setting page.

Note: WAN and LAN1 network ports support POE power supply

2. Set the computer to obtain the IP address automatically, and connect the LAN1 port of the device to the device manag ement interface.

3. The device is defaulted tothe inter face Router mode .The steps to enter the setup page as follows:

(Note: Please connect the wir eless network management page to the single network por t device)

(1)Under default configuration, power on the device and wait for the device to star t for 90 seconds.

(2)Connect device wireless SSID (default is COMFAST_XXXX_2G or COMFAST_XXXX_5G,XXXX is the last 4 digits of the MAC).

(3)Input 192.168.10.1 in the web br owser to get into the setting page.

(4) Open the computer browser, and input 192.168.10.1 to get into the device login page (Default username:admin, Default password:admin).The device language is compatible with Chinese and English to choose, and you can set up the language by the top right corner icon 🌐
4.When getting into the setting page, there are four working modes in the Wizard: AP Mode,Bridge Mode,Router Mode, Repeater Mode.
5. Click AP mode and set up IP Address and Subnet Mask. The IP address and Subnet mask should be within the same network segment as upper network and can't be conflict with IP address from upper network router.After settings, you can visit the device from the IP address you have set just now by connecting internet with WAN port of the device or POE adaper LAN port.

①Notes: In AP mode, the IP address from the other devices connected the AP will be allocated by the upper network router.

②The AP needs to set an intranet address (do not set the same IP address as the upper router).If want to manage the device,Manually set the IP address of the same network segment of the intranet IP.

6.AP Mode: You can setup 2.4G wireless SSID, password,channel and countryina dvance. After setting up,the device's WAN port orPOE adapter LAN port connected internet, other mobile devices can connect the SSID to surf the internet.

7.Bridge Mode: Plsensure the WDS in upper network is enabled. AP device can set up intranet segment (do not set the same IP address as the upper router), and the nselect the wireless SSID signal you need to b ridge and input wireless password. (Notes:The password is sameas yourupper net work router)
